

SPIRO BALL®

Volumetric Incentive Spirometer

ECONOMICAL

The small size of our SPIROBALL® allows a maintenance and storage saving without altering its function

HYGENIC

The SPIROBALL® is a single patient use. The SPIROBALL® incorporates a container to place the mouthpiece after being washed. This container has lower overture to drain the spared cleaning water drops. A total protection of the mouthpiece after its use is then guaranteed.

EASY TO USE

The inspiratory flow ball allows the patient to maintain the appropriate flow rate.

The scale on both sides facilitates the immediate lecture of the inspired volume.

The indicator helps the patient to be aware of its progress.

The extensible tubing and the mouthpiece container allow an easy storage of the device for the patient after his respiratory exercise.
